

## **INTRODUCTION:**

Thank you for your interest in "EZ Trellis"! The simple "easy" solution to all of your garden trellis needs.

Your "EZ Trellis" can be used for supporting tomatoes, beans, squash, sweet peas or any other vine-like garden plants that need your support.

The "EZ Trellis" can be used directly in the ground in your garden or in pots on a patio, balcony etc. One of the great things about your "EZ Trellis" is the fact that it is modular & expandable, so you can add-on additional "EZ Trellis" panels as needed for more height and you can use it in any direction you desire (whether it be vertically, horizontally etc.). The unique sleeves & ground stakes (included) are designed to slide on to the ends of the trellis to expand the size of the trellis and to also mount the trellis securely in the ground or in a pot.

Another great feature of the "EZ Trellis" is the fact that it is collapsible/ foldable for easy storage when not in use. No more ugly, cumbersome wire cages which rust and get all tangled together & are a real pain to store.

**Please read & follow the instructions (on the back) prior to installation!** I hope you enjoy your "EZ Trellis" and may your garden flourish for years to come! Gardening Made Easy! Thanks again! :-)
